

A message to those who are in the same
plight as I:

If you question the usage of the science -
concepts - ridiculous equations - symbols etc and
become completely fatalistic toward them - think
back a moment to your forefathers who devised
these methods.

These are just building blocks to
understanding. Just as you need tools to produce
a manual task - tools are essential in building
knowledge.

Nature does what it does without any
influences (until recently however). Man has not
and will never harness nature by merely
understanding its processes. The form
of study makes use of abstract concepts
to make understanding less tedious and
to standardize methods of expressing our
understanding of them possible and eliminates
a chaotic consequence.

This must be remembered if excellent
in any science is achieved.
